

“There is high level evidence indicating strong immunogenicity and vaccine efficacy against symptomatic COVID-19 in adolescents from clinical trials of Pfizer and Moderna.”

Source [Australian Technical Advisory Group on Immunisation \(ATAGI\)](#)

Sadly, what ATAGI fails to mention is that a key [article](#) relied upon for this ‘independent’ advice was written by 26 [industry insiders](#) of whom:

- a. 73% are employees of Pfizer/BioNTech;
- b. 62% have stock and/or options in Pfizer/BioNTech; and
- c. Two, are the CEO of BioNTech and his wife, the co-owners of the mRNA patents.

Also, on its jargon riddled [website](#) ATAGI does not say, or worse does not know, that:

1. In the UK for ages 0 to 19, between 01 March 2020 and 08 October 2021, the COVID-19 Survival Rate is **99.995%**;
2. In the UK for ages 0 to 14, from 2014 to 2020, the death rate from influenza and other respiratory diseases is **3.5 times higher** than it is from COVID-19;

3. In the US for ages 0 to 17, over the five years 2015 to 2019, there have been 9,724 adverse events against all influenza vaccines. While in the six months, April to September 2021, there have been 15,811 adverse events against Pfizer (BNT162b2) gene therapy alone.

4. In the US for ages 0 to 17, the risk multiple for deaths of Pfizer (BNT162b2) vs all other influenza vaccines is 6.5; and

5. In the US for ages 0 to 17, 55.3% of pericarditis and 51.3% of myocarditis cases have not recovered. The ‘long covid’ of covid vaccination.

It is clear that, for children and adolescents, COVID-19 poses a near

insignificant threat. While COVID-19 vaccination is a certain, measurable, and unwarranted risk.

ATAGI goes on to [say](#) ...

“Vaccinating adolescents is **anticipated** to contribute to a reduction in SARS-CoV-2 transmission in the broader population” and “there is

some **uncertainty** regarding the relative contribution by **adolescents** to the transmission of SARS-CoV-2 in the **wider community**”

It is clear that ATAGI is trading the **future** health of children and adolescents for the **anticipated** (but unlikely) **benefit** of lower case numbers amongst **today's** adults.

This can only be characterised as **intergenerational theft!**

A fact-based overview and risk assessment of childhood and adolescent COVID-19 vaccination, not written or funded by big pharma, is attached.

Kind regards,

A thoughtful and concerned citizen

Dedicated to my mother, to the 1,577 adults and young Australian victims of this disease, to those who suffered and continue to suffer; abandoned by our medical bureaucracy.
