

Dr Peter McCullough on the plan-demic (Big picture)

as introduced I'm Dr Peter McCullough I'm a practicing internist and cardiologist and I've trained in

0:05

epidemiology and I practice in Dallas Texas I hold degrees from Baylor

0:11

University UNC of Texas Southwestern the University of Michigan and Southern Methodist University many of you have

0:17

seen me on TV as a news commentator in the last few years I've catapulted into

0:22

public view but uh being in the public eye is not foreign to me I mean I

0:29

testified in the Congressional oversight piano for the FDA in 2007 on a big product label expansion I've lectured at

0:35

the European medicine Association New York Academy of Sciences I've given Grand rounds in virtually every Major

0:41

Medical Center in the United States and I am here to tell you we are in a

0:46

time of a great controversy there's no doubt about it everyone can feel it something has happened in recent

0:54

years and the great controversy is also the name of a book by Ellen G white who is one of the

1:02

founders of the Adventist Church in 1858.

1:07

the controversy as we sit here today involves

1:14

what I call a biopharmaceutical complex and it's in uh the title of a book I'm

1:20

going to leave the book with um our host today but the book is

1:25

available online as all books are preventing covid-19

1:30

courage to face covid-19 preventing hospitalizations and deaths while battling the biopharmaceutical complex

1:36

and in this book uh this is one of the few books in the covet genre where it's not a medical

1:42

book just telling my view of the world it's actually a story it's a story with

1:47

Dr Peter McCullough on the plan-demic (Big picture)

the beginning and middle and and it's a gripping it has a gripping plot to it but the plot's not fiction

1:54

it's real it's a real story what's happened and I'll structure my

1:59

comments the next few minutes into four parts the first part is what's happened what's happened is a biopharmaceutical

2:06

complex has formed this is a Syndicate it's a carefully organized Syndicate

2:12

they've been meeting together in Davos Switzerland for years on this

2:17

and everybody is in on it that look you can see uh in places of wealth and

2:25

Authority in the world this complex has figured out that in the

2:32

setting of a medical emergency in getting the worldwide impetus behind

2:38

this that doors of treasuries of governments all over the world will open and money will pour out into the complex

2:46

the complex will invest in itself the complex will co-opt and collude with

2:52

anybody they need to accomplish this goal and they will reward those people with future jobs in the complex

3:00

the complex is at the top We Believe the World Health Organization The Gates

3:05

Foundation the welcome trust the Rockefeller Foundation the World Health Organization Yuan gavi

3:13

Unity sepi the Coalition for epidemic preparedness and Innovation formed by

3:18

Gates and World economic Forum all the Regulatory Agencies and I could just go all through them from the FDA the CDC

3:25

the NIH the TGA the mhra Safra and South Africa

3:31

they've got them all and you know the complex is active by

3:36

just watching the movement Scott Gottlieb is one of my contemporaries former FDA commissioner

3:42

he's in the complex he's on the board of Pfizer now his predecessor Stephen hunt

3:48

Dr Peter McCullough on the plan-demic (Big picture)

who was very active as I was active in the early parts of the pandemic now works for the Venture Capital firm

3:55

supporting and funding moderna

4:00

recently a high-ranking official in the UK in the Medical Response just joined

4:07

moderna itself Deborah Burks remember her the scarf lady who was in the uh yes she's now CEO

4:15

of a biotech company you know from a being a public health official you can

4:20

see what's happening the complex is operative Gates Foundation invested just

4:26

a few million in BIO and Tech and they got out billions Millions to billions

4:33

those of you in the room who like money you would like this it is a money orgy right now

4:42

and there's been preparedness for this preparedness that's an important word the prep Act Congress and Health and

4:50

Human Services write the prep act in 2005 and it says we will have waves of

4:55

pandemics they're coming from zika to uh smallpox to

5:02

SARS to you name it is coming and we will be prepared and when is prepared it will be a National Security operation

5:09

it'll be a national emergency and we will have counter measures counter measures will be provided and they will

5:16

be immune from all forms of liability that's what the prep act said that was memorialized in 2005.

5:23

now recently just a few months ago Health and Human Services secretary bashara just has written the 14th

5:30

Amendment to the prep act even further extending the immunity of counter

5:36

measures counter measures are basically military operations so the view was we

5:43

were going to be attacked by an Invader not a foreign army but a virus

5:50

and we were going to behave like we were attacked by an army so anything we do militarily in response to this will be a

5:57

Dr Peter McCullough on the plan-demic (Big picture)

countermeasure and in the military they don't it's not about medical Freedom it's not about Freedom of Choice it's

6:03

not about keeping your business open or closed it's the military and one will respond the very interesting thing about

6:10

this is how the complex orchestrated this worldwide and simultaneously that

6:16

was I think very very impressive you've seen in the news recently

6:21

an announcement about Labs working on disease X that oh there could be any

6:27

disease and we're going to be ready for it Peter dasic who runs the Eco Health Alliance who is a rogue vaccinologist

6:33

the Uka Health Alliance is a go-between between the U.S funding agencies and and

6:39

bio Labs out in the world he published an op-ed in the New York Times in February of 2020. he says it's here

6:46

disease X is here announcing with great uh enthusiasm that

6:51

covet is here the pandemic is here and we need to get ahead of this with vaccines and in the future vaccines and

6:58

in fact when Gates Foundation and and wef formed sepi the Coalition for epidemic preparedness innovation in 2017

7:05

they have a business plan it says we will be a vaccine incubator incubator

7:10

with infinite funding and there will be pandemic after pandemic and there'll be only one response and that is mass

7:16

vaccination only one response not even a single word about therapy so what happened over time

7:23

is the U.S Department of Defense its Research Unit DARPA the National Institutes of Health

7:29

and it's basically military unit Barda HHS the Department of Defense the

7:37

National Security Administration the CIA and the FBI they got in the business of biological threats developing a

7:44

biological threat and then developing a response monoclonal antibodies Therapeutics

7:50

Dr Peter McCullough on the plan-demic (Big picture)

vaccines in this idea of threat response threat response became very very attractive and
7:57

there was basically unbridled investment in enthusiasm in this

8:02

academic researchers got drawn in if funding was so good listen I've had NIH

8:07

funding I've full professor of medicine I know about the research funding game an
infectious disease doctors instead of

8:14

devising new strategies or new antibiotics would have you it became so desirable to get
into the pandemic

8:22

response business about a future disease Ralph Barrick at the University of North

8:27

Carolina at Chapel Hill is the most published person on coronaviruses in the world
interesting in the last three years he's

8:34

been the most silent person on the national stage and he has been working for years on

8:41

trying to make a chimeric virus there's four coronaviruses that can affect us as like a
mild cold it never invades the

8:48

body and he was able to sue U.S funded research that was done in his labs and

8:53

other labs and at the very end it was done in China basically make the Prototype SARS
kovi2 that chimeric virus

9:01

and Barrick announced this discovery in two important Publications in nature

9:07

medicine and proceedings of the National Academy of Sciences in 2015 and the title of
these papers

9:13

said a sars-like chimeric virus that's poised for human

9:19

emergence it's like aha we did it we got the bad Coronavirus

9:25

we took the best of the bad coronavirus onto a human coronavirus and we got it to
invade a human respiratory epithelial

9:31

cell that was in the tract of mice and in these papers Barrick thanks the

9:37

Wuhan Institute of virology says thank you very much you do come we contracted the
work for you you did it in the

9:43

papers it says this is gain of function research and since the Obama ban on gain

9:50

Dr Peter McCullough on the plan-demic (Big picture)

of function research it was grandfathered in since we started before the ban we've just outsourced it to the

9:56

Wuhan Institute of virology it's in these manuscripts as plain as day no wonder Ralph Barrack is the most silent

10:02

person in the world this is 2015. It's announced they've made it the prototypical SARS Koji 2

10:10

virus exists in the Wuhan Institute of virology now fast forward in 2019 many different stories are are circulating

10:17

about about what happened did it get out by accident was there actually a test of the virus and its communicability at it

10:24

at basically a a semi Olympic competition there in 2019 but all

10:30

experts and former CDC director Redfield has testified on Capitol Hill that

10:37

indeed the virus came out of the lab in China and when he did a three-year false narrative fell

10:46

now that false narrative was started in 2020. Christian Andersen a vaccinologist virologist from Scripps Edwin homes from

10:53

Mercia Sydney Kurt rambutt from LSU and fauci

10:59

his boss Francis Collins Jeremy Ferrar at the welcome trust who's

11:05

now the senior scientist at The Who and Peter dasic at the ecohealth

11:10

alliance who ran the go-between the runner operation between the U.S and China they all get on a conference call

11:16

and and the emails are all there and they said what the f are we going to do about Barracks papers it's as plain as

11:23

day that this was created in Wuhan China and fauci and Collins orchestrate the

11:30

grand deception the deception was let's write a series of papers in front to the

11:35

world that it came out of nature it came out of a fish market this has all come out in the house select committee

11:42

oversight uh um Brad wenstrup who's the chair just published this on July 11

11:47

Dr Peter McCullough on the plan-demic (Big picture)

2023 it's pretty new it was a grand deception so as we sit here today our director of
11:55
the national immunology and Allergy Branch who stepped down our director of the NIH
multiple key International
12:00
Players conspired to conceal a global Health threat that took the lives of
12:06
people and instead of coming out and saying listen this was a U.S project we
outsourced it in China something went
12:13
bad it got out here's the full dossier this is everything we know about this
12:18
hear doctors save us instead of doing that they concocted and they maintained
12:24
a deceptive plan that ran through two presidential Administrations they were all in on it
they were all in
12:31
on it through the entire academic community and people would not flinch on this the
12:37
origin if anyone said it came out of the lab in China immediately one was accused of
misinformation
12:44
now since the house select committee there's been complete capitulation on the
National Security Administration
12:50
website yeah it came out of the lab it now FBI website CIA National Institutes
12:56
of Health Department of energy and so Rand Paul basically said wait a
13:02
minute all these agencies were in on it he said listen let's declassify the
13:07
documents so the the order for it to classifying all the US documents on the origins of
SARS Kobe 2 goes to Avril
13:14
Haynes who is Avril Haynes she is the Director of National Intelligence
13:20
do you know what she did in 2019 she was in event 201 that was one of the
13:26
pandemic preparedness planning committee meetings that was basically filmed and
13:31
her Section she was paired up with George GAO who was the head of the Chinese
CDC and they were in the um a
13:39
tabletop exercise of how do we deal with the public health response when people find
that it came out of a lab in China
13:47

Dr Peter McCullough on the plan-demic (Big picture)

there were 36 pandemic preparedness planning events since 2012. 36 25 had written documents six are film

13:55

like event 201 basically event 201 which happened in the fall was an operational meeting they already knew it was out of

14:01

the lab that's the reason why the Chinese raced over there to be there April Haines to this day will not

14:07

declassify the documents she's refusing to classify the documents

14:12

that's what that's the type of malfeasance that we have right now we are sitting on the biggest misadventure

14:20

in biological research and government operations worldwide of all time that's what's happened my role as a doctor when

14:28

this came out is I was responding I was making observations I was collaborating is besting rapidly as I could I I came

14:34

up with the first published protocol on how to treat the illness we quickly demonstrated at work we published a

14:39

series of papers by December of 2020 we had clear inconvincing evidence that early treatment was working and instead

14:45

of being celebrated you know the story I was crushed

14:51

no you can't say a word about early treatment you can't even talk about any of the components of early treatment

14:57

in fact doctors can't prescribe early treatment and pharmacists can't dispense the medicines

15:02

who was suppressing early treatment the CDC NIH and FDA HHS every single

15:09

Medical Society in every single major health system incomplete lockstep

15:14

some places it was more severe if a doctor even thought about it and mentioned it

15:20

doctor would be do certified Canada's Got a thousand doctors on the sidelines Australia about the same amount France

15:26

2000 New Zealand thousand United States we have a few but we have a lot of them like Dr Kerry and myself that have

15:31

Dr Peter McCullough on the plan-demic (Big picture)

basically had our professional careers disassembled those who were suppressing
15:37

early treatment were in this government narrative and the government
15:43

narrative I am convinced and I really outlined it in the book was intentional it was
intentional to create fear

15:50

suffering hospitalization and death yes governments intentionally wanted to harm
15:57

their citizens all over the world all at once now that is a great controversy how
16:03

can all the minds think the same all at once I did this some things on clubhouse and I
was astounded I had doctors in the

16:09

Netherlands tell me that essentially they were you know committing euthanasia to
seniors in the Netherlands instead of

16:15

treating covert they were giving them lethal doses of morphine the same thing was
happening and you know in the in the

16:21

jungles of Africa and South America people started to behave incredibly bizarrely all
over the world it wasn't a

16:27

U.S phenomenon there was a small number of people who seemed to have eyes to see
16:32

and ears to hear and there were just a mass that appeared to have skills over their eyes
they just

16:39

were clouded they could not possibly register that we should be treating the illness I
testified in the Texas Senate

16:46

um that's what ultimately I was on Tucker Carlson the the next month I looked at HHS
and I just blew them out

16:52

of the water I said I've sat through eight hours of testimony people are talking about
masks and

16:58

lockdowns and vaccines nobody's talking about the sick person right in front of us what
are you doing what the sick

17:04

person right in front of us and everyone's jaw dropped this is about taking care of sick
people that's what

17:09

this is all the pandemic response was focused on well people everything was applied to
a well person

17:15

Dr Peter McCullough on the plan-demic (Big picture)

not a sick person there was nothing for the sick person so there's the suppression of early treatment and those suppressing herbly treatment were the

17:22

same entities that were ready to and in fact completely pushed vaccines

17:28

and these weren't any vaccines the vaccines were genetic they were brand new

17:35

they were rushed to development although messenger RNA Technologies old technology it just has not worked out it

17:40

was a technology designed to replace missing proteins not produce foreign proteins in our body to try to raise an

17:46

immune response that was a disastrous idea and so when the vaccines came out at

17:53

first it was elective but we saw bizarre things happening in the first week of the vaccine program

17:58

three thousand pregnant women took shots since when do we ever have a pregnant woman take a brand new medicine let

18:05

alone a genetic injection and then it went on from there you know the story The mandates and all of that it just

18:12

went and went and our liberties were stripped and if you remember all these statements right look at Arnold

18:18

schwarzen Schwarzenegger F your freedom right oh thanks Arnold really

18:26

and it just swept across the nighttime TV and the pejoratives the vaccinated or

18:33

the unvaccinated but the the the the floor fell out of the vaccine campaign early it was found out they'd only lasts

18:39

less than six months so you weren't really vaccinated if you went more than six months people have really dropped off I I recently had held a Twitter Poll

18:46

for the lack of any other information and I wanted to know who's actually in the vaccine narrative

18:52

that is if someone's truly in the vaccine narrative they would have taken seven Shots by now seven

18:58

I said does anybody know anybody who took seven shots let alone a public figure

19:04

Dr Peter McCullough on the plan-demic (Big picture)

when talking to people I couldn't come up with one I recently went on the show with Laura Trump she's the

19:10

daughter-in-law of former president Trump I said do you know anybody like your father-in-law and um nobody so

19:19

anyhow on Twitter it was around nine percent people said yeah I know somebody's taking but most of them were Canadians or people outside the United

19:25

States there have been people who've taken the vast majority dropped off quickly so the vast majority of people took shots took them early they were

19:32

scared they weren't sure they thought they were vulnerable okay but people quickly figured this out

19:38

the CDC Veris system of Adverse Events that have come in on the vaccines show

19:45

that you know once we get to five six seven shots it's way less than one percent of the reports coming in there

19:51

so almost all the action is early the vaccines didn't work they didn't

19:57

stop anybody from getting covered they didn't stop transmission our CDC director came out and said that early

20:04

and they didn't reduce the severity of disease they're not going to prevent a

20:10

recurrence right now there's a fear media campaign right now saying everyone should take more shots because more

20:15

covet is coming they failed on all four counts they failed on all four counts

20:21

and I think America would have accepted an apology America would have been very

20:26

forgiving the world would have been okay with that if they were safe but it turns out the vaccines as many of

20:33

you know aren't safe as we sit here today we have 3 400

20:39

peer-reviewed papers describing fatal and non-fatal vaccine injury symptoms in

20:44

the National Library of Medicine it is not controversial it's not a

20:50

theory it is real these vaccines cause very real side effects and they're in

20:56

Dr Peter McCullough on the plan-demic (Big picture)

four major categories one is cardiovascular and cardio heart inflammation myocarditis
Cardiac Arrest

21:01

number two is neurologic all forms of stroke gambarre syndrome neuropathy number
three

21:08

blood clotting blood clotting like we've never seen in medicine before blood clots that
don't respond to typical

21:13

blood thinners that are just a disaster and number four immune system abnormalities

21:19

I'm not ready to call cancer right now although people are very worried about cancer I
can't imagine that a single

21:26

protein and the genetic code for it would in addition to those four things

21:32

cause a fifth major category disease being cancer I just can't imagine that makes
staphylococcal toxin look like

21:39

look like a you know a cupcake I mean it's just it's it is it is inconceivable

21:45

how a protein could be that deleterious to the body what we've learned is the protein
that that is produced from the

21:51

messenger RNA vaccines is not broken down by human enzymes it's not just gets stuck
in the body potentially

21:58

forever this is a giant problem no wonder we have problems two years later there's a
22:04

recent paper by Lee and colleagues from China That's demonstrated that two years
after taking shots in 2021 there's micro

22:11

blood clots circulating through the retinal arteries and retinal veins not in everyone but in
a percentage about two percent or

22:18

so people have asked the question why are some people take these shots and they're
perfectly fine and other people have

22:25

literally died in the vaccine Center and what of the deaths that the cdhc knows about
1100 die in the center or an

22:33

hour or two afterwards it's that acute I interviewed on my show I interviewed a
paramedic who's been going out to the

22:40

vaccine centers and doing cprs tell me about it so it's very real the reason is in a paper
by schmelling

Dr Peter McCullough on the plan-demic (Big picture)

22:47

and colleagues from Denmark where they had all the Adverse Events they had all the lot numbers and patches and Manufacturing batches just about a third

22:55

of the shots in in this low risk batch have zero side effects not even a sore arm nothing zero zilch and they don't

23:02

have anything later on if you're in that group if you've taken the shots and you didn't feel it you're good there's

23:08

another group about two-thirds where they have some modest side effects and that's it and then there's this third

23:15

batch that's where all the action is is 4.2 percent of the doses and is potentially lethal that's where all the

23:20

blood clots are the heart damage is 4.2 percent of doses it matches almost exactly with the lead data it matches

23:27

very similar with the CDC V safe data which say 7.7 percent of Americans get so sick with the shots they have to go

23:33

to their urgent care or or the hospital afterwards so it's a small number of

23:38

people who are really really taking risk and others that are basically getting away scot-free how can that

23:45

happen because under emergency use authorization of which bashira just extended for these all the way till

23:51

January 1 of 2024 um December 31st to 20 24. there are no

23:58

inspections despite having plenty of time and resources for infections the vaccines have never been inspected for

24:04

quality Purity or contaminants Japanese have returned millions of doses because of of visible contaminants in the vials

24:12

so all of American biotechnology and Ingenuity all the best that we have turns out Pfizer modern and the

24:18

companies don't even make their own products they are subcontracted to defense biodefense contractors that's who make them but no inspections

24:26

and the FDA is staunchly defending this the FDA is staunchly defends complete opacity on safety they haven't conducted

Dr Peter McCullough on the plan-demic (Big picture)

24:33

a safety review and Pfizer's 90-day safety dossier finally under court order was was opened up to America there was

24:41

1223 deaths within 90 days this Pfizer should have been taken off the market January 2021. moderna never

24:48

should have come out the FDA never stopped it Pfizer never stopped it the FDA wanted to block that

24:54

to America for 55 years the FDA and Robert caliph who's the head who's a personal friend of mine is a

24:59

cardiologist from duke they are in on this great controversy

25:05

my final sets of comments have to do not with covet at all I know you're you're all here did you mention this but I I'm

25:12

bringing this up because it's an example of how the house of medicine can quickly become

25:18

co-opted corrupt misguided misdirected and do harm and the answer here or the topic of

25:26

concern is the sudden transgender crisis

25:31

the sudden transgender crisis the sudden human desire to change from one gender

25:39

to another that seemed to come upon us overnight well what's going on here turns out this

25:44

transgender crisis has been brewing for about 15 years over in Europe in fact it's kind of burning out in Europe right

25:50

now but it's been going on for a while but there's been a rise of LGBT and interest in transgender and

25:58

people truly trying to change their genders and live out that fantasy and then a rise of another illness that

26:04

they're the two parallel each other I'm an epidemiologist I train at University of Michigan on this and I study these

26:10

patterns the other illness that is in lockstep with transgenderism is autism an Autism Spectrum Disorder the two are

26:19

Dr Peter McCullough on the plan-demic (Big picture)

mirror imposed autism when I was born was one in ten thousand now it's one in 36.
some schools actually have autism

26:26

tracks in the schools for kids it's so common now attract it's like a it's like it's like a
curriculum tract

26:33

it's that common the Pediatric and psychiatric Community throws their hands up and say
well we

26:38

don't know what's causing it it's a Neuropsychiatric syndrome there are roughly 800
papers

26:44

200 of which focus on the immune system that are arriving that autism in some

26:50

way is related to the acceleration of hypervaccination in children giving rounds and
rounds of vaccines when I was

26:57

a kid there were five shots now there are a total of I think a child under two

27:02

receives 29 shots through age 18 with covid we're at 108 shots there's one NGO

27:09

by the way out there that's part of this complex they're aspiring for human beings to
actually take 500 shots

27:16

500 shots someone said Dr McCullough you're an anti-vaxxer I said my gosh I I asked
my mom for my

27:23

vaccine card I counted everything up I grew up my mom was told to take me in

27:29

for a vaccine I took vaccines this body you're looking at I took 69 shots

27:34

I'm not an anti-vaxxer I'm a pincushion for crying out loud what I've become is I've
become vaccine

27:41

risk aware that vaccines in the 1986 vaccine injury compensation act in the legislation
says

27:49

that vaccines have unavoidable harm and for that reason the manufacturers must be
held free of liability unavoidable

27:56

harm so what we know is that autism is driving the transgender epidemic a vast

28:02

numbers of people who are in the LGBT community are ostracized they don't feel like
they fit in and they are preyed

28:09

Dr Peter McCullough on the plan-demic (Big picture)

upon in this indoctrination towards transgender medicine transgender medicine has dozens and dozens and

28:15

dozens of papers out there the hormones in the surgery worsen the psychiatric burden of disease increased mortality

28:22

from all causes and are loaded with complications it's so bad that states

28:27

are Banning it since when do states have to ban something that major medical centers and doctors do there's no Doctor

28:33

Who should do this there's no nurse that should participate in this there's no hospital should do this no ethical

28:39

person would do this the the diagnosis is gender dysphoria

28:45

that means one's not happy with their gender the cure for gender dysphoria is to go through normal puberty that's

28:51

where a male and a female brain uh form Dr carriages is a psychiatrist he can

28:57

answer a lot of questions on this The Cure is not to do disfiguring surgeries

29:02

and prescribe hormones that are unnatural and try to force their way through this yet the transgender crisis

29:08

is a crisis upon us and the house of medicine is on fire right now people have asked me Dr

29:15

McCullough how can cardiologists strongly advise or push the vaccines that cause heart damage on heart

29:21

patients I I said I don't know I really don't know how can people be

29:27

forced to in the heart I just on the way here I flew next to one of our doctors at my hospital in Dallas who's on the

29:34

transplant service and he was a surgeon he was shaking his head he goes they are forcing the vaccines on the transplant

29:39

patients and they're dying before they ever get to transplant how can that get in the minds of people

29:45

how can doctors possibly think do you know the endocrine Society the American College of Pediatrics and OB gen societies all strongly support

29:51

Dr Peter McCullough on the plan-demic (Big picture)

transgender medicine the autism advocacy Network strongly supports uh uh
29:56

transgender medicine every state that's banned it immediately has had those bands
stayed by the autism advocacy
30:04

Network and other interest groups through the ACLU Texas is their Journey General
reached
30:10

out to me just last week and said Dr McCullough can you please issue a statement we
can't find a doctor who
30:16

will step up and tell us that transgender medicine is Bad Medicine not a single doctor in
the entire state
30:22

it's astounding we're in a time of a great controversy there's no doubt about
30:27

it the house of medicines on on fire when doctors got on the wrong side of
30:32

smoking do you know doctors used to advertise cigarettes they used to smoke in the
operating room do you know that it took 40 years from the time we knew
30:40

smoking was bad for the human body and caused cancer to the to the tobacco side and
doctors say oh yeah it's bad 40
30:46

years ignacimowice in Vienna in 1500 proposed
30:51

that we wash our hands and he had data to reduce infections in pregnant women 15
years of writing books and and giving
30:59

seminars like this would have you and he died in an insane asylum they said this guy's
nuts we should never have to wash our hands
31:05

okay the opioid pandemic's been going on for two decades now
31:11

the house of medicine isn't what you think it is and the way you take charge is you take
31:16

charge using your common sense doing what you're doing now anything that violates
your common sense
31:21

anything that violates your principal Moorings in life challenge it someone tells you to do
something tomorrow that
31:28

just doesn't make sense don't go along with it you really have to stand up for your civil
liberties and
31:34

Dr Peter McCullough on the plan-demic (Big picture)

I'm so glad to be here I'm going to turn it over to the rest of the program and I'm be happy to take questions

31:39

afterwards thank you for having me

31:48

thank you thank you [Applause]
