

Crimes Against Humanity by Scott Morrison

letter from

Australian Government

Dear fellow Australian,

SCOTT MORRISON LIAR

It's now time to think about your COVID-19 **vaccine booster**, for those who are fully vaccinated. Importantly, if you are yet to have your first vaccine or complete the second vaccination, please do so.

Twenty months ago, Australia was at the start of a once-in-a-century pandemic, the size and scope of which we could barely comprehend at the time.

In the face of this challenge, each of us did what was needed to support each other and work together as a country so we could get through it safely together.

We made the sacrifices and followed the medical advice. Australia now has one of the lowest number of cases per head of population in the world and our health response has saved over 30,000 Australian lives. ZERO CHANGE IN MORTALITY RATES IN AUSTRALIA IN LAST 5 YEA

Thanks to the high vaccination rates, we are now re-opening, our economy is strongly re-emerging, and people can get back to seeing family, travelling and living a more normal life.

SCOTT MORRISON IS LYING TO THE AUSTRALIAN PEOPLE THEY HAVE SAVED NO LIVES

An important part of this process is ensuring that every person in Australia has access to vaccine boosters to help maintain the best possible defence against serious illness or death.

FACT..... 674 deaths after the jab & 84,521 adverse events to 19 Nov21

With over 151 million additional doses secured, boosters are freely available to everybody who is fully vaccinated, and should be taken from 6 months after your second dose. The date you had your second dose is shown on your vaccination certificate. You'll be able to get your booster from your GP, local pharmacist, or you can make a booking through australia.gov.au

30,000 lives saved ? bull-s

Zero change in mortality rates

BULL-S

CHECKED

Australian Government

Dear fellow Australian, in last 5 years

It's now time to think about your COVID-19 **vaccine booster**, for those who are fully vaccinated. Importantly, if you are yet to have your first vaccine or complete the second vaccination, please do so.

Twenty months ago, Australia was at the start of a once-in-a-century pandemic, the size and scope of which we could barely comprehend at the time.

In the face of this challenge, each of us did what was needed to support each other and work together as a country so we could get through it safely together.

We made the sacrifices and followed the medical advice. Australia now has one of the lowest number of cases per head of population in the world and our health response has saved over 30,000 Australian lives.

Thanks to the high vaccination rates, we are now re-opening, our economy is strongly re-emerging, and people can get back to seeing family, travelling and living a more normal life.

An important part of this process is ensuring that every person in Australia has access to vaccine boosters to help maintain the best possible defence against serious illness or death.

With over 151 million additional doses secured, boosters are freely available to everybody who is fully vaccinated, and should be taken from 6 months after your second dose. The date you had your second dose is shown on your vaccination certificate. You'll be able to get your booster from your GP, local pharmacist, or you can make a booking through australia.gov.au

With over 80% of Australia already fully vaccinated and more doing so every day, we can be proud of being one of the most protected countries in the world against COVID.

Everyone in Australia is encouraged to take up the vaccine boosters to make sure we can keep each and every one of us safe.

in 9 months 642 deaths

The Hon Scott Morrison
Prime Minister

The Hon Greg Hunt
Minister for Health

Prof Paul Kelly
Chief Medical Officer

76,586 adverse reactions

Figure 3³

So how can one conclude thousands of deaths were saved due to vaccines in the UK (which is only a little larger than England and Wales)? Total deaths were already down with negligible vaccination numbers. The increase after the red line is the normal seasonal increase the UK encounters every year.

Victoria and NSW are no different. There is no evidence that vaccines reduced thousands of deaths and certainly we are not living it. **Victoria never had an increase in normal total deaths throughout the pandemic as shown in Figure 14.**

Please note a control chart was used as excess deaths make assumptions and hence are subject to error. **From 2016 there has been no change in registered deaths**, apart from 3 outliers. One was due to an update of death statistics that was not included in the year that it should have. We clearly have an issue with intelligence and competence amongst our experts.

First, if there has been no change in total deaths then the reported covid deaths did not contribute to deaths. **The people who died with covid most likely would have died anyway.** It is no different than classifying a pimple death just because a patient had a pimple when she died. If the average and variability did not change with covid reported deaths then why the obsession with reported deaths just because covid was present?

Secondly, Victoria's monthly deaths increased by 400 per month after 2016. That is a whopping 4800 deaths per year? We **have destroyed the economy and ruined people's lives over a handful of deaths that have had no impact on total deaths. But 4800 per annum was never questioned.**

So how can we conclude vaccines have saved thousands of lives? How can we say we are living it? It has been acknowledged by the science community that vaccines are not effective against infections. Australia and Victoria never had any change in total deaths due to covid. How can we conclude that vaccines reduced deaths when there has never been an increase in total deaths in the first place. ? It does not matter what the biased and unscientific reported death numbers are. Total deaths were not effected, so why cripple the economy and take away our dignity to make our own choices and bring little children into the equation, even the Doherty Report stated it would make no difference.

Victoria and NSW are no different. There is no evidence that vaccines reduced thousands of deaths and certainly we are not living it. **Victoria never had an increase in normal total deaths throughout the pandemic as shown in Figure 14.**

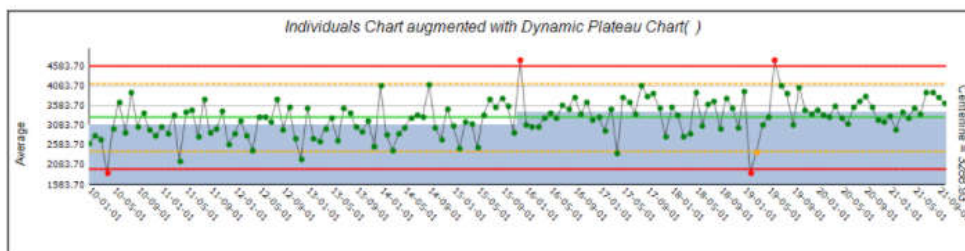

Figure 14 Augmented Control Chart of Registered deaths for Victoria 2010 to October 2021.
