

“It is not possible to eradicate COVID19 from the globe, nor is it possible to keep it out of Australia. We need to start talking about the likely outcomes of COVID19 circulating in the community. We need to start talking about accepting death as an outcome of disease ”

Source. [Dr Rodney Allan](#)⁴ (President Neurosurgical Society of Australasia)

This is perhaps one of the most truthful statements to come out of medical bureaucracy throughout this overwhelming saga.

And while it may sound ominous, the reality is not as dark; with actions to significantly lessen COVID19 deaths readily achievable. We just need to remember that:

1. As of 31 October 2021, based on [Cambridge University estimates](#)¹ adjusted for Australian cases and mortality, the all ages **Infection Survival Rate** is higher than **99.87%** (analysis attached).
2. Compared to **no** comorbidity, the risk of dying from COVID19 is **1.48** times **higher** for **one** comorbidity, **2.55** for **two** comorbidities, **2.62** for three comorbidities, and **4.07** for **four** comorbidities ([source](#))².
3. In Australia, according to ABS data released 28 October 2021, **73.4%** of people who died from COVID19 had **pre-existing chronic conditions** certified on their death certificate ([source](#))³.
4. Across the 50 States of America, **vaccination level** is **NOT** the key driver of **lower** COVID19 deaths (analysis attached).
5. Across the 50 States of America, **population health** (i.e. chronic adverse medical conditions, exercise, and diet) **IS** the key driver of **lower** COVID19 deaths (analysis attached).

If medical bureaucracy was serious about reducing COVID19 deaths they would be urging Australian governments and private organisations to mandate **greater exercise, weight loss, less junk food, and better nutrition**. And a **concerted effort at reducing chronic adverse health conditions**.

Sadly these are not profitable courses of action for the many vested interests. And, Australian medical bureaucracy has negligently squandered a unique opportunity to reset the health of a nation.

Attached is an evidence-based review of COVID19 deaths and survival, not written or funded by big pharma or their agents in institutional research and academia.

Kind regards,

A thoughtful and concerned citizen

Dedicated to my mother, to the 1,722 adults and young Australian victims of this disease, to those who suffered and continue to suffer; abandoned by our medical bureaucracy.
