## Halt Covid Vaccine, Prominent Scientist Tells CDC

In a public comment to the CDC, molecular biologist and toxicologist Dr. Janci Chunn Lindsay, Ph.D., called to immediately halt Covid vaccine production and distribution. Citing fertility, blood-clotting concerns (coagulopathy), and immune escape, Dr. Lindsay explained to the committee the scientific evidence showing that the [coronavirus vaccines](#) are not safe.

On April 23, 2021, the CDC's Advisory Committee on Immunization Practices held a meeting in Atlanta, Georgia. The focus of [this ACIP meeting](#) was blood clotting disorders following Covid vaccines. Dr. Janci Chunn Lindsay spoke to the CDC during the time set aside for public comment.

The [censorship on social media in particular and the internet in general](#) is relentless. Here is a slightly edited, annotated censorship-proof transcript of Dr. Janci Chunn Lindsay's 3-minute comment.

You can listen to her testimony on YouTube [here](#) (for now, anyway. YouTube will likely [censor](#) it).

## **Molecular Biologist and Toxicologist Calls to Halt Covid Vaccine**

Hi, my name is Dr. Janci Chunn Lindsay. I hold a doctorate in biochemistry and molecular biology from the University of Texas, and have over 30 years of scientific experience, primarily in toxicology and mechanistic biology.

In the mid-1990s, I aided the development of a temporary human contraceptive vaccine which ended up causing unintended autoimmune ovarian destruction and sterility in animal test models. Despite efforts against this and sequence analyses that did not predict this.

I strongly feel that all the gene therapy vaccines must be halted immediately due to safety concerns on several fronts.

### **Janci Chunn Lindsay: Covid vaccines could induce cross-reactive antibodies to syncytin, and impair fertility as well as pregnancy outcomes**

First, there is a credible reason to believe that the Covid vaccines will cross-react with the syncytin and reproductive proteins in sperm, ova, and placenta, leading to impaired fertility and impaired reproductive and gestational outcomes.

Respected virologist Dr. [Bill Gallaher, Ph.D.](#), made excellent arguments as to why you would expect cross reaction. Due to beta sheet conformation similarities between spike proteins and syncytin-1 and syncytin-2.

I have yet to see a single immunological study which disproves this. Despite the fact that it would literally take the manufacturers a single day to do these syncytin studies to ascertain this [once they had serum from vaccinated individuals]. It's been over a year since the assertions were first made that this [the body attacking its own syncytin proteins due to similarity in spike protein structure] could occur.

## **Pregnancy losses reported to VAERS lead to demand to halt Covid vaccine**

We have seen 100 pregnancy losses reported in VAERS as of April 9th. And there have [also] been reports of impaired spermatogenesis and placental findings from both the natural infection, vaccinated, and syncytin knockout animal models that have similar placental pathology, implicating a syncytin-mediated role in these outcomes.

Additionally, we have heard of multiple reports of menses irregularities in those vaccinated. These must be investigated.

We simply cannot put these [vaccines] in our children who are at .002% risk for Covid mortality, if infected, or any more of the child-bearing age population without thoroughly investigating this matter.

[If we do], we could potentially sterilize an entire generation. Speculation that this will not occur and a few anecdotal reports of pregnancies within the trial are *not* sufficient proof that this is not impacting on a population-wide scale.

## **Covid vaccine causes blood disorders**

**Secondly, all of the gene therapies [Covid vaccines] are causing coagulopathy.** [Coagulopathy when the body's blood clotting system is impaired.] **This is not isolated to one manufacturer. And this is not isolated to one age group.**

As we are seeing coagulopathy deaths in healthy young adults with no secondary comorbidities.

There have been 795 reports related to blood clotting disorders as of April 9th in the VAERS reporting system, 338 of these being due to thrombocytopenia.

There are forward and backward mechanistic principles for why this is happening. The natural infection is known to cause coagulopathy due to the spike protein. All gene therapy vaccines direct the body to make the spike protein. Zhang et al in [a [scientific paper published in the Journal of Hematology & Oncology](#)] in September 2020 showed that if you infuse spike protein into mice that have humanized ACE-2 receptors on blood platelets that you also get disseminated thrombosis.

Spike protein incubated with human blood in vitro also caused blood clot development which was resistant to fibrinolysis. [Fibrinolysis is the body's process of breaking down blood clots]. **The spike protein is causing thrombotic events, which cannot be resolved through natural means. And all vaccines must be halted in the hope that they can be reformulated to guard against this adverse effect.**

### **Third, there is strong evidence for immune escape–**

At this point in her oral testimony, Dr. Janci Chunn Lindsay was interrupted by a man's voice: "Thank you for your comment, your time has expired."

I reached out to Dr. Janci Chunn Lindsay to find out what else she had wanted to share with ACIP, in addition to her concerns over fertility and blood-clotting disorders. She sent me back her third point, which she submitted as written testimony.

**Third, there is strong evidence for immune escape, and that inoculation under pandemic pressure with these leaky vaccines is driving the creation of more lethal mutants that are both newly infecting a younger age demographic, and causing more Covid-related deaths across the population than would have occurred without intervention.** That is, there is evidence that the vaccines are making the pandemic worse.

It is clear that we are seeing a **temporal immune depression** immediately following the inoculations [see [World Meter Global Covid](#) deaths counts following inoculation dates] and there are immunosuppressive regions on spike proteins, as well as Syn-2, that could be likely causing this, through a T-cell mediated mechanism. If we do not stop this vaccine campaign until these issues can be investigated, we may see a phenomenon such as we see in [chickens with Marek's disease](#).

We have enough evidence now to see a **clear correlation with increased Covid deaths and the vaccine campaigns**. This is not a coincidence. It is an unfortunate unintended effect of the vaccines. We simply must not turn a blind eye and pretend this is not occurring. We must halt all Covid vaccine administration immediately, before we create a true pandemic that we cannot reign in.

### **MIT scientist also concerned about blood-clotting, fertility issues**

Stephanie Seneff, Ph.D., an expert in protein synthesis, believes that Dr. Lindsay's hypothesis is

correct. "I absolutely share these concerns," Dr. Seneff, who is a senior research scientist at MIT, wrote to me in a sobering email.

"The potential for blood clotting disorders and the potential for sterilization are only part of the story. There are other potential long-term effects of these vaccines as well, such as autoimmune disease and immune escape, whereby the vaccines administered to immune-compromised people accelerate the mutation rate of the virus so as to render both naturally acquired and vaccine-induced antibodies no longer effective."

Like Dr. Lindsay, Dr. Seneff believes we need to immediately halt Covid vaccine campaigns. "This massive clinical trial on the general population could have devastating and irreversible effects on a huge number of people," Seneff explains.

Despite these fertility and blood disorder concerns, the [CDC panel voted last Friday to resume the use of the Johnson and Johnson vaccine](#). They did, however, suggest an FDA warning label be added. Their argument against halting Covid vaccination? The CDC believes the benefits outweigh the risks.

### **About Dr. Janci Chunn Lindsay**

Dr. Janci Chunn Lindsay is the Director of Toxicology and Molecular Biology for [Toxicology Support Services, LLC](#). She holds a doctorate in Biochemistry and Molecular Biology from the University of Texas Graduate School of Biomedical Sciences, M.D. Anderson Cancer Center-Houston. Dr. Lindsay has extensive experience in analyzing the molecular profile of pharmacologic responses. Her expertise centers on evaluating the complex dynamics of toxicity, such as toxicant pharmacology, exposure route, host metabolism, and subsequent cellular effects as they relate to the contribution of specific substances to impairment, health and fertility risk, and human disease.

How will this vaccine affect the blood supply? If a recipient gets blood from a vaccinated donor?

[Reply](#)

alan says

MAY 2, 2021 AT 4:45 PM

Vaccinated donors contaminate the blood supply. It's not clear how long the body is forced to produce the foreign protein. Since it can bind with any cell including blood cells and platelets, this and the protein antibodies will be passed to recipients. Both are biologically active. A study released in Jan 2021 revealed these protein antibodies cross react with over two dozen human tissues.

Both can also be passed to someone else via any body fluid...saliva, sperm, etc. IMO someone needs to develop an app or site so the unvaxed can readily access uncontaminated blood.

## Reply

*deb says*

MAY 6, 2021 AT 4:03 PM

Very good point. My sister and I were talking about this as I used to work for a blood donation center. Not really sure that blood donation centers should be taking on all donors without somehow distinguishing and separating those donations from vaccinated people to be given ONLY to vaccinated people and vice versa. I tend to think this is not only a Health issue but also a spiritual issue, where our Creator is being challenged and those who get vaccinated are changed into a somewhat hybrid human through this synthetic alteration. I want no part of anything that is not of our Divine Creator, as I belong to him and not this World!

## Reply

*rahwa tesfai ghermai says*

MAY 7, 2021 AT 1:31 AM

In a world like this why why would they give the unvaccinated uncontaminated blood? Why wouldn't they intentionally contaminate us?

Then there's the issue of offspring. Just WHO are unvaccinated young adults supposed to have children with now? What a bloody mess...

An American scientist claims that Covid-19 vaccines pose safety concerns, including sterilization and changes to DNA, in remarks shared on social media. But experts and public health bodies say there is no evidence that mRNA shots are causing reproductive problems, and are not modifying the genes of recipients.

*jen says*

MAY 13, 2021 AT 8:03 PM

Ask yourself why very well-renowned, experienced scientists and physicians who are warning the public about the dangers in these Covid shots are being banned and censored. Why are the reports about side effects, including individual stories about people who have experienced deaths in their families and serious adverse effects being taken off social media? Big Pharma is making billions on these “vaccines”. Medical journals are heavily funded by these companies. Pfizer paid out billions in lawsuits for falsifying data and bribing doctors. Fauci funded the Wuhan lab and gain of function research, which is where Covid came from. You have to make an effort to find the truth on sites that don't censor information.

*mike says*

MAY 15, 2021 AT 6:36 AM

absence of evidence is not evidence of absence

*janci lindsay says*

MAY 17, 2021 AT 7:00 PM

Yes, the fact checkers only cite to statements made by those who head organizational bodies that have clearly been corrupted as they are willing to make sweeping statements endorsing no effects on fertility or maintenance of pregnancy in the absence of relevant scientific data. I found the following on one such site:

“ While fertility was not specifically studied in clinical trials of the vaccines, the statement explains that “no loss of fertility has been reported among trial participants or among the millions who have received the vaccines since their authorization, and no signs of infertility appeared in animal studies. Loss of fertility is scientifically unlikely.” This is hardly a scientifically-based argument with references. The problem

is that the animal studies which were cited as proof that this will not happen were done in While fertility was not specifically studied in clinical trials of the vaccines, the statement explains that “no loss of fertility has been reported among trial participants or among the millions who have received the vaccines since their authorization, and no signs of infertility appeared in animal studies. Loss of fertility is scientifically unlikely.”

The animal studies referenced and not cited properly were not done in an appropriate species to ascertain this. Mice and rats, do not share the same syncytin proteins with humans. Only old world primates share these protein similarities. This is why I have pressed for the appropriate

studies to be done. As far as no reports in humans, I find that to be patently incorrect. Besides emails that I get quite often from medical professionals attesting to an alarming increase in miscarriage and still birth amongst the vaccinated, in VAERS reports the miscarriages reported as having a relationship to vaccination have gone from 100 as of April 23 to 275 as of May 9. While some may not be associated, this is an alarming increase over past reports.

*dusan says*

MAY 13, 2021 AT 4:24 AM

And do not forget the risk of auto-immune disease. Body produces foreign protein that attaches itself to other cells and it can result in our bodies fighting against themselves.

MAY 2, 2021 AT 6:25 PM

Excellent!

What I wonder about is since the "vaccines" don't actually work, can they create more lethal mutants through immune escape?

The Pfizer trial data show us that they don't work (other vax trial data is similar):

Out of 22k people that received vaccine, only saved 8 severe COVID cases over placebo group. That's 0.04% effective, which is essentially zero.

MAY 3, 2021 AT 1:41 PM

Yes, "leaky" vaccines can cause immune escape of the virus because both contraction and transmission is still possible. The most drastic of which is described in Marek's disease. Dr. Geert VandenBossche (sp?) has also commented on this and has asked that we halt all vaccinations with the GTs.

I'm wondering if there is a connection between the millions of doses of Ivermectin administered in Africa last year and the reports coming in and telling us that Africa has an unexpectedly low covidic deaths/million ratio. If there is a connection between ivermectin and survival, it would be the sixth reason BBC could add to its article.

The following quote is from the WHO's report: "In APOC's final year, more than 119 million people were treated with ivermectin, and many countries had greatly decreased the morbidity associated with onchocerciasis. "

Ivermectin is safe for humans. We should be experimenting with something safe like ivermectin for preventing and treating covid-19 instead of experimenting with a vaccine that is not proven safe, let alone fully effective (I read in the news reports that a vaccinated person can still get infected, transmit the virus and die from the disease.) Nobody is dying from ivermectin.

With millions of people treated with ivermectin every year, there is a statistically significant group of humans that can be "measured" for new cases/hospitalisations/deaths.

"In APOC countries, over 100.8 million people were receiving regular treatment for onchocerciasis by the end of 2012. 184 560 communities

distributed ivermectin representing an overall geographic coverage of 95.4%.”

I've known about these terrible issues for months and I've told everyone I know this is nothing more than voodoo poison 🦠 and they should not take it or give it to their kids. They tell me I'm a conspiracy theorist and I'm stupid and part of the problem. I can't believe how hateful my so-called friends have become.

One day, when they are suffering the ramifications of an unproven poison, I hope they think back on all the times I warned them and how they told me I was stupid. I wish none of them any harm and pray for everyone's health especially the kids that were forced by their parents to be injected with God only knows what.

MAY 8, 2021 AT 5:11 PM

There are many speaking out now and I'm thankful for it. Maybe an effective way to warn is just to stress that these are still experimental and we are seeing deaths and heart attacks in healthy young adults demonstrating that there is a clear problem. Also and importantly there are other effective treatments that are safe and have been used for decades like ivermectin and hydroxychloroquine-- yes it's safe, the studies showing it was not were frauds and this has been shown. All this plus the potential for infertility is not worth the risk.

MAY 4, 2021 AT 5:03 AM

I'm 69 years old. I went through menopause 15 years ago. Four days after taking the first dose of Pfizer I started having uterine bleeding. My GYN did a biopsy and ultrasound and said I had no thickening or tumors. The bleeding continued for 19 days, heavy with clots. Then stopped suddenly four days after the second dose. I am concerned about my granddaughter's taking this vaccine.

MAY 4, 2021 AT 7:27 AM

Thank you so much for reinforcing my statements very early in this vaccine forced compliance push. 1st this is an EUA, experimental Use authorization product not approved at this time as FDA approved and yet the line is constantly be pushed for mass inclusion of the population. The virus is cyclic and will be back every season. More study and data is required for adverse outcome.

Reply

MAY 4, 2021 AT 8:56 AM

Excellent work my dear sister!

The right people must listen to your concerns and the real truth be told so that all the Governments of every nation in the world, who are actually implementing these vaccine drives, must be appraised about these dangerous consequences of these so called vaccines. After all, the 'vaccine industry' is a trillion dollar business opportunity to the corporate giants who do not like to listen to such truthful findings, partly out of sheer ignorance and greed. God save this world!

MAY 5, 2021 AT 9:27 AM

Watch the Series called Utopia, there is a single season for the US market produced in 2020 and then 2 seasons produced in the UK from a few years before that. The US series is the one that appears to show this very aspect of the vaccine campaigns as

being the method to depopulate, so that aside from those who die from vaccine side effects at the moment or days after the injection, the rest will be made sterile and no further births will be produced which will further depopulate the world... The idea being that instead of WW3, they just induce a fake plandemic to induce the believers to obey their hand picked seated authority, and take the injections and self harm themselves out of having further children going forward.

Course they been putting little tidbits in the main stream programming for years... hows this one from the big bang theory... 🤪

MAY 8, 2021 AT 10:41 AM

Because the FDA is corrupt right along with the CDC

Reply

TIMOTHY MADDEN *says*

MAY 11, 2021 AT 8:23 PM

Actually they are not corrupt.

The world is ever-increasingly controlled and administered by people who genuinely believe whatever is necessary for the answer they need.

Administrative agents of the entrenched-money-power have solved the criminal-law enigma of "mens rea" or "guilty mind" by evolving or devolving (take your pick) into "professional-schizophrenics" who genuinely believe whatever they need to believe for the answer they need, and who communicate

among themselves subconsciously by how they “name” things, and by how things are “named” for them.

They suffer a “cogno-linguistically-induced” diminished capacity that renders them incapable of perceiving reality beyond “labels”.

It may seem a little out of “left-field” as it were, with respect to the vaccine issue, but the linked article (below) on fraudulent interest calculation methodologies used by mainstream institutions (or rather the people who run them) is really a study in how the masses can be induced to believe anything - no matter how transparently absurd. We are now seeing it “mutating” and “infecting” the medical fields as well.

The whole world is falling into a crisis of “innumeracy”. And it has been done - even orchestrated - quite deliberately.

<http://werex.org/nominal-rate-real-fraud/>

Hope it helps. Tim.

MAY 6, 2021 AT 12:26 PM

Vaccines have always been the silent holocaust. With the covid vaccine it is just a lot more obvious! It's about depopulation. The more they can lower the population count, the easier it is to control the masses. Read the books The Great Controversy and The Ministry Of Healing. It won't seem significant at first, but the further you read through the books the more you will make the connection.

Also, the books 1984 and Brave New World were written for the purpose of warning people about what our society would be coming to in the future. The future is NOW!!!!

MAY 8, 2021 AT 5:59 PM

Thanks, Jennifer. I see you co-authored The Vaccine-Friendly Plan, so any attempt to call you an “anti-vaxxer” would be slander.

Dr. Lindsay’s last paragraph is quite disturbing. If she’s correct about rising Covid-19 deaths after vaccination, that could be an early sign of antibody dependent enhancement (ADE) and, as she warns a true pandemic that can’t be reined in.

It’s interesting that in 2019, Deagel.com published a forecast for 2025 indicating a US population would fall to 99.5 million. For some reason, they’ve deleted that page and redirected the url to their home page. However, the page they deleted is still available from the wayback machine:

<http://web.archive.org/web/20200102160838/http://www.deagel.com/country/forecast.aspx>

So, why did they delete it? Why now?

Any suggestions for those who received the jab and are now pregnant? My niece had the Moderna jab. She did not know she was pregnant. She is 18 weeks pregnant. She is on anti-coagulant medication as she has had blot clots before. I am afraid for her and baby.

Reply

*ej says*

MAY 10, 2021 AT 6:09 PM

Don't get the second dose, if she hasn't already. Aside from that, keep as healthy and nourished as she can (vitamins; health conscious food; eating for two; history of blood clots) because developing a condition such as gestational diabetes or diabetic hypertension increases risks for clotting. Get her blood labs checked with an OB/GYN monitoring her pregnancy (doesn't have one, find one), because blood thinners while pregnant (long-term) isn't a winning recipe for good things (depending on the medication; some are better than others and an OB/GYN would

know; also, medication TIMING during gestation is important to get right - depending on how many weeks into pregnancy the fetus is exposed to something can affect either affect or not affect particular developing systems in the fetus). A good OB/GYN can set her up for the best possible outcome and help if things go awry.

MAY 14, 2021 AT 2:46 PM

Looking at this, it's not true that the spike protein is overall similar to syncytin: it does have two short sequences that match, but that's not a substantial amount. Almost any human viruses would have these sequences in common with syncytin.

What is interesting is WHY that's true: syncytin is the protein necessary to sustain placental hosting of the fetus that allowed mammals to evolve when syncytin was acquired via a viral infection. It is the ultimate example of a huge evolutionary leap occurring via viral infection that changes our DNA. That's why it has some sequences in common with viruses, because syncytin is a viral acquisition that is part of us.

*janci lindsay says*

MAY 17, 2021 AT 10:14 PM

This may post twice because I don't see what I posted earlier. In my experience from

Working with a group on a temporary human contraceptive vaccine, that caused auto immune ovarian ablation, sequence analyses does not always predict cross reaction. Therefore it is important to do the appropriate animal studies to rule out unintended auto immune consequences. The multiple debunking articles citing too short of a sequence similarity, etc... does not carry the weight of doing the very simple immunological assay while also still perusing the appropriate animal reproductive studies in old world primates who are the only species which share the similar versions of the syncytin proteins. At this point I expect the manufacturers with no proper safety oversight and public compliance, will just be content to use humans for their experiments... it's much cheaper.

[Reply](#)

DR DEBABRATA DAS.MD (HIM) says

MAY 18, 2021 AT 8:22 PM

If the risks are present as described above, truly then we must be more careful to select the age group & sex before vaccination. We can't be close eyed about those severely affectable /serious changes in human. Risk versus gain of Covid vaccination needs more prolonged study, slower & selective implementation of this genetically modified vaccination programme

MAY 14, 2021 AT 7:53 PM

There are issues some serious issues in how this information was presented, it makes me unsure about what to believe.

1. "Due to beta sheet conformation similarities between spike proteins and syncytin-1 and syncytin-2..."

Those are not very similar; they're definitely less similar than some antigens which have no reproductive effects.

2. "I have yet to see a single immunological study which disproves this."

Are there immunological studies that provide evidence FOR the effect? It's been asserted that it's possible (which is dubious if it's based on #1 above), so I would hope there is there evidence for it. Is there?

3. "We have seen 100 pregnancy losses reported in VAERS as of April 9th."

Out of how many vaccinated pregnant people? Is 100 more/less/same as the number of losses that would be expected if the vaccine had no impact?

4. "And there have [also] been reports..."; "Additionally, we have heard of multiple

reports..."

Does anyone have citations for these? Are these anecdotal or included in VAERS reports? Have they been published?

The blood clotting studies and data have been updated since this comment was made and I don't want to pick apart the statements that were made before then; as new information comes out of course our understanding will evolve. But I thought there was more evidence for the pregnancy risks. The statements here are concerning in their lack of accuracy/evidence, I'm not sure what to think.

MAY 17, 2021 AT 9:21 PM

Please provide your email address and I'll send the written comments which have the references cited, or they should be posted by now on the ACIP site. There are syncytin knockout animal

Models which show the inability to maintain pregnancy. The same is shown by silencing these genes in vivo. The similarities in confirmation and sequence were enough to cause someone who spent the majority of his studies in the field of vaccine development to post his concerns as well as others such as Drs Woodard, Yeadon and Bruno. Again, since the ELISA studies are simple to do and these companies have the pre and post inoculation sera I would think that an easy way to debunk these assertions which have been made by several different scientists and made over a year ago, is to do the assays and publish the negative results. There are hundreds (some report thousands globally) of concerned women reporting abnormalities in menses both pre and post menopause as well as reports of increases in miscarriage and still births reported amongst clinicians who see these on a regular bases. The reports in VAERS are also significant and above all other reporting to date associated with vaccine campaigns. Is this sufficient evidence to state it is definitively impacting the endpoint through Syncytins or spike or other components of these vaccine gene therapies? That remains to be proven and that is why there is reason for concern with using these experimental GTs still in phase 3 of trials on vulnerable populations.. amongst the clear coagulopathy and "leaky"

design flaws. It is sufficient evidence to pause with the lack of sufficient and appropriate animal reproductive studies in groups of reproductive age and children who are both at low risk for a Covid mortality or significant morbidity.

## Reply

*janci lindsay says*

MAY 17, 2021 AT 10:00 PM

I tried to post this earlier but could not post. It's pertinent to note that the VAERS database has miscarriage reports 100 at April 23, 213 as of April 30, 275 as of May 9. VAERS is estimated by a Harvard study to contain less than 1 percent of adverse reactions including deaths which now (even at the underreported number) eclipse the number of deaths for the past years from all vaccines, added. There is also another site V-safe which is effectively spitting the reporting and I'm not sure if these are all being reported into VAERS. This is also voluntary for individuals but is supposed to be mandatory for healthcare professionals. The problem is that many are not reporting because they don't ask vaccination status despite them being experimental, don't know it's mandatory to report, have no central guidance or instruction on this and/or no designated person assigned to file the reports. This has been brought up in a letter to the FDA and brought up to me by concerned healthcare professionals.

## Reply

*janci lindsay says*

MAY 17, 2021 AT 9:26 PM

I would also add that from my own experience with a group that worked on a contraceptive vaccine that caused unintended ovarian ablation, that sequence

analyses matching does not always predict outcome... thus the need for appropriate animal studies prior to use in the human population.

Reply

*janci lindsay says*

MAY 17, 2021 AT 9:31 PM

I would also encourage anyone questioning the pregnancy concerns to go to VAERS or [Wwwopenvaers.com](http://Wwwopenvaers.com) and check out the individual reports of pregnancy losses (miscarriage) that have been reported and their symptoms and timing to the vaccines. The numbers are behind and still being backlogged into March and April. However as of aApril 23 there were 100, April 30; 213, May 9; 275.

Reply

*janci lindsay says*

MAY 17, 2021 AT 9:40 PM

Also worth noting is that the VAERS database while being much maligned, by Pharma when it does not suit, has never been updated more appropriately and even the alternative V-safe rolled out in this campaign is voluntary reporting thus splitting the voluntary reports between sites, as I understand. VAERS is estimated to contain less than 1 percent of adverse effects by studies. Some say it may hold up to 10 percent on lethalties, but I've never seen a cite for this greater percentage in contrast to the less than 1 percent a Harvard study and grant proposal cites.
